Giants: View of the hilltop the path that the giant took when it rolled, appendages laying in the trail, Inspection of the defunct network shows the round rock has internal layers of sediment and pockets of void space, . The frozen giant was on the hill top, blew up like a bubble and rolled down the hill, with appendages frozen mid tumble and broken off with positive pressure from the internal mass transformations giving the cracks a popping sound from the rapidly escaping gas,

Omega: A cadaver is laying prone and there are two items the shape and size of horseshoes close to his shoulder, the other by his waist. They could also be the letter omega as an insignia or badge of some sort. There are fragments of extremities laying on the substrate close by. This site must've been very close to a large detonation or was affected by the use of some kind of incendiary weapon and is just another of the many examples of specific targets being manipulated broken or defaced beyond any recognition whatsoever, , the other hypothesis is SILVERBACK was entombed in dust and ash and a mudflow and collided with the blade of a bulldozer that was used to clear the site. Was exposed to the on the surface and denatured to its current state,

Short cursive verse, place names, standard speak, optical illusions.

There is a pattern to the script and it is complex and skillfully crafted, seemingly utilitarian for a mariner. The strings of letters are large and easy to see from a distance and are placed high above the high tide marker on broad long hill faces above busy areas and the foreshore. This could be a sensible approach to deciphering the verse, or at least parts of it to see if there are actually discrete words mixed in the rolling script that can yield details about place names and language used ,

Brains. Brain stem and spinal column from at least three separate species: a larger animal, possibly a monitor-like lizard or medium sized canine, an avian brain and a brain stem of what looks to be reptilian; inferences can be made about the sizes of the creatures respectively from the size of the brains cerebellum mid brain, if they are similar to their Earth counterparts. Astonishing occurrence of petrified anatomy all in one place with signs indicating a swamp crew came in and did some analysis. It could've been at any point in the timeline moving backward. So, items selected and sorted analyzed and left out in the open,

Item removed but left an imprint: The item was embedded in the rock and was subsequently pried out and removed. The item must have been valuable enough to take. Further analysis of the area at length may reveal the object could be laying close by like the miners hand clutching for the gem as he imploded, but not this time.

Addendum to the previous, the skin of the scalp face and head with eye holes is laying beside the skull with signs of trauma with a knife or other sharp excising tool such as a scalpel or laser. With all the evidence of transect lines and right angles carved arrow straight in the rock, I now somewhat suspect that incidents like this with the perfect cut removing the outer scalp could be more of this sample extraction survey in addition to the MOI we have been following. Jezero is seemingly more like a museum of human prehistory rather than a lifeless dusty red rock.

Smoking Gun: Rocket interior with an enigmatic stone carving of a male with a tall crown with a bold symbolic male icon on it.

The location of this epic monument corresponds to a position between the core station on sol 736 and a station some 348 meters distant across the outlet of the crater NORTH of the island in the MIDDLE which could be deliberately misleading, and definitely it looks like Lord Shiva. I expect it is about 50 meters away from station 746 towards the core station at 736.

Head of the Creature: A series of images that lead to a core sample that was taken on what I expect is a marine mammal of some species. The mouth is similar to that a bowhead whale, similar size as well, Sample retrieval and a second visit to this site is key as I expect there is more to yield from this station.

Discrete wall engravings with ecumenical ramifications: Wall carvings of a bearded man with a broad eyed character that is seen elsewhere in the greater target area. The image is of the face and head shoulders of an upright biped broad eyed unidentified being that looks intelligent and distinctly non human. possibly the two are together for a reason; to represent a friendship that once was, a being that is familiar with the human, together on Mars , Typhon and , exact position squelched, For me, this relates to the partnership that could've been; The Pointed Soldier and the captive, she is obviously round headed and the head of the soldier is obscured by his high helm, she is with a burden of sticks on her back surrounded by a mob ; The top fraction of the art is removed,

three slides

the first a small carving of a captive,

the next two show Tall helm with beard , round headed girl with burden

the last image is very clear image of the top fraction after removal.

A circular, textured surface, possibly a planet or a large rock, showing a mottled pattern of light and dark patches, set against a dark background. The texture is granular and uneven, with various shades of gray and white. The lighting is somewhat uneven, with the center appearing slightly brighter than the edges. The overall appearance is that of a celestial body or a large, weathered rock.

Perplexing forms that do not resemble natural features: The rover covered 202 meters over the course of the 20 sols is a pretty vast area, and to discretely narrow down where a 4 decimeter long strip of hierarchic is could be a challenge, otherwise I think its probably a nice picture.

An EPIC engraving of giant fighting smaller humanoid: relief etched in the rock is a highly significant carving in that it proves in etched rock that the conflicts we have heard about giants in our past are in fact true and did happen. Also the image provides scale to exactly how large these giants really were. There are two string of verse engraved in the wall,

The estimated location is between the sol 1048 station and sol 1052 station which is a distance covered of 119.5 meters over 7 sols. My best guess it is close to station sol 1052 which corresponds to these coordinates; N 77,32784450 X E 18.49147851
